EXHIBIT "C"

1	A. With the company?
2	Q. Any company?
3	A. Yeah.
4	Q. Compared to those other skiffs that you
5	operated, was this skiff in better condition, the
6	same condition, or in worse condition than other
7	skiffs that you operated prior to the Cashman job in
8	2001?
9	A. It was medium.
10	Q. Somewhere in between?
11	A. Yeah.
12	Q. Did Cashman supply this skiff?
13	A. Yes.
14	Q. You said that you were always tinkering
15	with it. Can you give me a general idea of what type
16	of tinkering was done to the skiff or the motor on
17	the skiff, let's say, let's take it in the first
18	month or so of the job?
19	A. The motor seemed to run okay up until that
20	point, but it had sunk a week before Steve's
21	accident.
22	Q. Okay, well, let's stop there since you've
23	kind of given us a point of reference. Prior to the
24	motor sinking, and this again was prior to Ramsey's

1 accident, what type of tinkering, if any, did you have to do with the skiff or the motor? 2 3 Just the wiring to the bilge pump and 4 maybe the navigational lights on it, minor electric 5 problems, you know, but nothing regarding the motor. Did these minor electric problems require 6 Ο. 7 repair? Just by myself a splice on the wire or 8 9 something, run new wires. Did you have any training in making that 10 Q. 11 type of repair? Α. Yes. 12 What type of training did you have? 1.3 Like I said, I'm a licensed captain, and 14 Α. 15 I've been working around equipment for over 20 years, and I'm familiar with wiring and mechanical work. 16 17 Had you ever made those types of repairs 18 prior to making them on this skiff? Α. 19 Yes. 20 On how many occasions? Q. 21 Α. Numerous. 22 Did any of those repairs or those problems 0. 23 require you or anyone at Jay Cashman to actually take

it out of the water and have it serviced somewhere

else?

- A. Not those repairs, no.
- Q. Now we're going get to what you referred to before. You said that the boat sunk sometime prior to Mr. Ramsey's injury; correct?
  - A. Yes.
- Q. Can you describe for me the circumstances of the -- well, when you say "sunk," are you talking about the skiff sinking, the engine sinking, or both?
- A. Well, we would go home on the weekends, and when we came back Monday morning, at this particular time, the skiff was submerged at the dock. It had been raining all weekend and the pump didn't work inside the boat, the bilge pump.
  - Q. What is the purpose of the bilge pump?
- A. To keep the water from building up inside the skiff. So the motor was half submerged in the water. It wasn't completely sunk but it needed to be hauled out and looked at.
- Q. Let me back up for a second. I do have some more questions about that but let me just back up. You said that you guys would go home on the weekends; correct?
  - A. Yes.

1	Q. How long into the job were you prior to
2	seeing that the skiff sank on the time that you're
3	talking about?
4	A. I'd say a couple months.
5	Q. And you had gone home every weekend before
6	that?
7	A. Yes.
8	Q. When you did go home on the weekends,
9	prior to the skiff sinking, what did you do with the
10	skiff?
11	A. Tie it up at a safe dock inside a cove
12	that was protected from the weather.
13	Q. Would it be still in the water or out of
14	the water?
15	A. In the water.
16	Q. Did you ever in those two months or so,
17	those few months or so, did you ever take the skiff
18	out of the water with a crane and put it on the
19	dredge?
20	A. Yes, we have a couple times.
21	Q. That would be completely taken out of the
22	water and removing all of the elements of the water
23	from possibly damaging the skiff; correct?

A. Yes.

Q. Other than putting it on the dredge or putting it in a cove, had you ever done anything else with the skiff on the weekends that you guys didn't work on the job, again, prior to the boat sinking the first time?

A. No.

- Q. Where was the skiff this particular weekend when it sank?
  - A. At the dock in the cove.
- Q. Was there any particular reason why the skiff wasn't taken out of the water and put on the dredge that weekend?
  - A. Only that we expected it to be okay.
- Q. When you made decisions in the past, those two months or so, to take the skiff out of the water and put it on the dredge, was there any particular reason why you did it on those occasions?
- A. Because we had prior warning of gale force winds or something of this nature that we knew the skiff could be damaged if we didn't take it out of the water.
- Q. Was it difficult in any way to take the skiff out of the water and put it on the dredge?
  - A. Not too difficult, no.

1	Q. Did you put the skiff in the same cove
2	when you did leave it in the water?
3	A. Yes.
4	Q. Where was the cove in relation to the
5	dredge?
6	A. A quarter of a mile up the river.
7	Q. So when you returned this particular
8	weekend, when you returned to start the job again
9	I guess it would have been on a Monday?
10	A. Yeah.
11	Q. You saw that the skiff had sunk; correct?
12	A. Yes.
13	Q. And that the engine was, you said,
14	partially submerged?
15	A. Partially submerged.
16	Q. And did you somehow then get the skiff and
17	the engine out of the water after you saw that?
18	A. Then we there was a local marina there
19	that helped us get it out of the water, and they
20	actually serviced the engine at that time.
21	Q. Did you make a determination that the
22	engine first of all, when you got it out of the
23	water, did you try to make a determination as to
24	whether the engine would start?

1	A. Well, you could tell it was submerged
2	enough that it had probably damaged the starter and
3	electronics on it that it needed to be looked at.
4	Q. Whose decision was it to take it to the
5	marina?
6	A. Myself and Alex Dick.
7	Q. You told me earlier that you worked as the
8	superintendent and you had crew members under you;
9	correct?
10	A. Yes.
11	Q. Were there any other Cashman employees
12	that were on the job between the time the job started
13	and the time the boat sank the first time?
14	A. Yes.
15	Q. So it was yourself. Was Mr. Dick there
16	all of the time also?
17	A. Yes.
18	Q. Anyone else?
19	A. Yeah. I can't think of his name offhand.
20	Q. How about a guy named Nick?
21	A. Yeah, Nick Wagner.
22	Q. And, first of all, starting with Mr. Dick,
23	what was his job title?
24	A. Nick Wagner?

23

```
1
                0.
                    No.
  2
                Α.
                    Alex Dick.
  3
                0.
                    Yeah.
  4
                Α.
                    He was a project manager.
                    I'm sorry, you did tell me that before.
  5
                Q.
  6
        Nick Wagner, what was his job title?
  7
                   He was another superintendent.
  8
                   You indicated that you had made, I think
               0.
  9
        it was you and Mr. Dick, made the decision to have
10
        that engine serviced at a local marina; correct?
11
                   Yes.
               Α.
12
                   Can you remember the name of the marina?
               0.
13
               Α.
                   I don't.
14
                   Okay. Hochstrasser's Marina, does that
15
        sound familiar?
                   It could be. I couldn't tell you.
16
               Α.
17
               0.
                   I don't want you to guess.
18
               Α.
                   I'm not.
19
                   Were you personally involved in
               Ο.
20
       transporting the engine to the marina?
21
              Α.
                   No.
22
              Q.
                  Who did that?
23
              Α.
                  I couldn't tell you. It was either Nick
24
       or Alex.
```

- Q. Did you have any conversation with either Nick or Alex about repairing the engine?
- A. Only to make sure it's running right. We can't fool around in this current with something that's going to break down.
- Q. Why do you say that? You made reference to the current in the conversation we had off the record.
- A. Because the current is one of the worst on the East Coast and you just can't have a vessel that's running -- everything has to be running up to snuff or it's not safe.
  - Q. Including the engine; correct?
  - A. The engine especially.
- Q. So based on your experience and based on your observations of the current, did you conclude that it was important to make sure that there was nothing wrong with that engine when it ran the skiff in the water?
  - A. Yes.

23

- Q. At some point in time, did you get the engine back?
  - A. Yes.
  - Q. Did you have any conversations with anyone

at Jay Cashman, either Alex or Nick or anyone else, 7 2 about the engine between the time that the engine left to go to the marina and the time that it came 3 back? 4 Α. About the engine? 5 6 0. Yes. 7 Α. We only had it back maybe a day or two and it wasn't running as well as it used to. That was obvious. Q. Let me back up for a second. Did you receive any information before the engine came back from the marina as to the condition of the engine? Α. No. When you got it back, did you receive any information as to the condition of the engine compared to the condition of the engine prior to the boat sinking? A. Only that they did fix it and it should be okay. Who told you that? 0. Alex Dick. Α.

24

Nick that there were recommended repairs to the

engine that were not done?

Was there any mention from either Alex or

A. Not to my knowledge.

- Q. I assume that at some point when you got the engine back you tried to run it on the skiff; correct?
  - A. Yes.

- Q. And you indicated earlier that it wasn't running the way that it ran prior to the boat sinking. Can you be more specific?
- A. That it would stall. It would stall out unless you -- if you brought it to an idle, you'd have to rev it up and keep it going.
- Q. Take us through the process of you're getting to the skiff and you're getting the engine running to go from point A to point B. Tell me what you do to make that engine run and to make the skiff travel?
- A. You shift it forward to go forward and give it more gas to go.
- Q. Take me from the step when you actually stepped into the skiff. Tell me exactly what you do.
- A. You get in the skiff, turn the key, choke the motor, warm it up, and then you're ready to go.

  You shift forward and throttle up, and it would be all right. But in neutral it was not running

smoothly, you know, but when you gave it gas it was 1 2 okay. You're talking about this is the condition 3 Ο. of the engine after you got it back from the marina? 4 Α. Yes. 5 And how did that differ from the condition 6 of the engine before you got it sank? 7 8 Α. Before it sank it seemed to run fine. When you said that it stalled out, did you 9 Ο. have a problem with it stalling out before it sank? 10 Α. No. 11 Do you recall on how many occasions prior 12 to the date of Mr. Ramsey's accident, even including 13 14 the date of Mr. Ramsey's accident before he operated it, that it stalled on you? 15 MR. MURPHY: I'm sorry, I just missed 16 Can vou read that back? 17 18 (Last question read back by the reporter.) I think only a day or two that we, myself 19 Α. 20 in particular, noticed that it wasn't running as 21 smooth as it was before. 22 Q. Based on that observation did you let 23 anybody at Cashman know about any problems with the stalling out of the engine? 24

- Yeah, we were all pretty -- you know, they 1 Α. 2 saw me having problems with it. 3 Q. Who is they? 4 Everybody on the dredge. Everybody would 5 watch you leave and arrive on the skiff to make sure, 6 you know, to help you with lines tying up to it and 7 stuff. Would that include Mr. Dick and 8 Ο. 9 Mr. Wagner? I couldn't say for that. Most of the time 10 11 they were on shore. And myself, I spent my time out 12 on the dredge itself. 13 Did you make anyone at Jay Cashman, including either Mr. Dick or Mr. Wagner, aware of the 14 stalling out problems on the engine? 15 I had talked to Alex Dick about that the 16 Α. 17 engine wasn't running as good as it did before.
  - Q. Do you recall what Mr. Dick's response, if

19

20

21

22

23

24

A. I believe he said, well, see if we can change the spark plugs or do something, and if that doesn't work, we'll have to get it serviced again.

any, was to your comment?

Q. Did he request either you or any member of the crew or anyone else to attempt any repairs on the

1 engine between the time you got it back and the time 2 that Mr. Ramsey's accident occurred? It wasn't point blank to make repairs. 3 Α. was just a suggestion, you know, do you think if you 4 5 change the spark plugs it would get better? Because 6 that was something that we would do on a normal thing 7 anyways. 8 Do you know if anyone, including yourself, Ο. attempted any repair on the engine between the time 9 10 you got it back from the marina and the time that 11 Mr. Ramsey's incident occurred? 12 Not electronically, no. 13 Well, my question, first of all, was any Q. 14 repairs at all? 15 Α. Only trying to keep it from stalling out, adjusting the linkage on the shifting on the --16 17 Did you do that personally? Ο. 18 Α. I did, yeah. 19 Q. Did that help? 20 Α. It made it better. 21 Did it completely resolve the stalling out 0.

Did you, in turn, even after those

22

23

24

problem?

Α.

Q.

No.

attempted repairs, let either Mr. Dick or Mr. Wagner or anyone else from Jay Cashman know that there were still stalling out problems with the engine? Again, this would be between the time you got it back from the marina and prior to Mr. Ramsey's incident.

- A. I don't think it was mentioned again.

  Again, the skiff wasn't a primary source of transportation, and so it wasn't on the top priority list to have it looked after right away.
- Q. When you say "top priority list," whose priority list was that? Was that yours? someone else's? combination of both?
  - A. A combination of both.
- Q. But the skiff was used on a daily basis, correct, prior to Mr. Ramsey's accident?
- A. Yes, but it wasn't totally necessary, you know, as if the skiff wasn't working, then we could resort to using that tug gunney, which we used regularly anyways for crew changes.
- Q. But speaking of safety, would you agree or disagree with me that it's safer to have the tug boat next to the dredge, in case something happens, than to have the tug boat being used for other purposes?
  - A. The tug boat was a combination usage. For

heavy equipment that we might need to get from shore or fuel to bring out to the dredge, or to set the anchors, but it also -- we didn't want to use it -- well, it also -- crew changed too.

- Q. Let me just -- I want to jump ahead and then jump back to try to clarify this point. The day of the accident Mr. Ramsey has testified that he took the skiff in part to go pick up some bolts, I think from shore, and then take them back. Is that your understanding also?
  - A. Yes.

- Q. Would that type of task, errand, let's say, would that be something that you would use the skiff for as opposed to the tug boat?
  - A. Yes, it would be easier to use the skiff.
- Q. Okay. I'm going to direct your attention now to the date of the accident, which was April 5th of 2001. What time was starting time that day?
  - A. Seven a.m.
- Q. Do you recall what the weather conditions were?
  - A. It was actually a sunny day.
- Q. Do you recall what the current conditions were when you started at 7 a.m.?

1	A. At start I couldn't recall exactly. I
2	think it was the current was running pretty hard.
.3	Q. Is there any type of documentation you had
4	to fill out when you start the job that day as to
5	weather and/or current conditions?
6	A. No, because it was always the same. It
7	was always running hard except for slack tide.
8	Q. Well, the fact that it was running the
9	same, would that did you feel as though strike
10	that.
11	Was it company policy to keep that
12	kind of record at the beginning of the day?
13	A. No.
14	Q. Would you on your own, either in this job
15	or any other job, would you keep that kind of record?
16	A. No.
17	Q. What was the crew's job that day; do you
18	recall?
19	A. Just preparing for slack tide. I believe
20	that we were going to be setting some rock mats that
21	day. Steve was getting bolts.
2.2	Q. Can I stop you there?
23	A. I'm not sure but I think they were for the
24	clam bucket on the crane.

21

22

23

24

Did you just run it to run it, or did you

1 run it to go from point A to point B? 2 That's how I came. I would always bring Α. the skiff out to the dredge. 3 4 0. From the cove? 5 From the cove, yes. Α. 6 0. Was that the only time the skiff was used 7 before Ramsey used it that day? 8 Yes, I was the only one that used it 9 before him. 10 Q. Did you use it just for that trip from the 11 cove to the dredge, or did you use it for any other 12 trips? 13 I think I made one other trip into shore Α. and back, and, matter of fact, it was running okay. 14 It wasn't a hundred percent, but I told Steve to be 15 16 careful. 17 Let me go back for a second. When you said that it wasn't running a hundred percent, are 18 19 you referring to your use of the skiff prior to Steve's use of the skiff on the day of the accident? 20 21 Α. Yes. Now, what do you mean that it wasn't 22 running a hundred percent? That, well, we all knew that it had sunk a Α.

23

few weeks prior to that and it still wasn't running that great.

- Q. You had said that there was a problem and, correct me if I'm wrong, the problem that you described with the engine after you got it back from the marina had something to do with you putting it in neutral?
- A. No. When you would put it in gear initially, it would stall starting out.
- Q. Are you talking about putting it in forward?
  - A. Yes.

- Q. And then once you got it started again, was there any problem going into any other gear other than forward?
- A. There probably would be going back in reverse.
- Q. Did you experience, when putting it in reverse, any type of stalling problems? Again, this is after you got it back from the marina and before Ramsey used it.
- A. I would avoid putting it in reverse knowing that something wasn't right with it.
  - Q. You had indicated that you had
